

ANTENOR G600: PAYMENT KIOSK FOR CARWASH SYSTEMS.

- Simple Graphical User Interface to select washing program.
- Multilanguage support (N, F, E, ??)
- Payment with Banknotes, Coins, Proton, Bancontact.
- Can give change money and generate receipt ticket on demand.
- Optional support of vending and payment with fidelity card.
- Powerful operator options for detailed reporting, including web-interface.

Applications.

The G600-CW is an interactive payment kiosk for carwash tunnels and roll-overs. Customers can operate the kiosk out of their car to select the cleaning program of their choice on the comprehensive colour touch screen. After payment, the kiosk passes the program instructions to the tunnel, an optional ticket may be generated and the customer can proceed.

Modular Payment Options

The Antenor G600 Payment kiosk can be configured to accept banknotes, coins, Proton, BC/MC, fidelity card or any mix of these payment options. When using a fidelity card, this card can optionally be purchased at the machine and can be recharged with an optional bonus system.

A Happy Hour system can be programmed to make some wash programs more attractive during certain time-zones. This way, an operator can promote extremely attractive prices during off-peak periods.

Robust and Reliable

The G600 is made as a strong stainless steel case and is suited for outdoor installations. It is typically installed on a pillar or integrated in a wall. Customers operate the unit from the front, servicing is performed through the back door.

All payment modules and accessories of the machine have been carefully selected by Antenor to assure the most reliable operation throughout its long life cycle.

User and Operator Friendly.

Thanks to an intuitive Graphical User Interface and the touch screen, the G600 will guide both novice and regular customers to an efficient service. The product supports upto 4 languages which are selectable by the user on the spot.

The appearance of the screen during operation and at idle time can be personalised to match the house-style and to include a logo or commercial messages.

For a seamless exploitation, the G600 keeps track of all transactions and money received. This data can be audited on the screen, printed out on a printer or analysed in full detail on an external PC, using the transfer through a memory stick or access via the Web-interface on a LAN-port.
