

ANTENOR L200: THE VANDAL-PROOF RECHARGE STATION.

Recharges Private Payment System.

- > Support of different technologies.
- > Modular Payment Options.
- > Optional distribution of cards.
- > Robust and Reliable
- > Simple to use for both Users and Operators.

Applications.

The L200 is the payment station to recharge an electronic purse used in private payment systems. Variants of the L200 exist to support different types of cards: based on magstripe, hard contact or contactless MIFARE cards. For some applications it is very useful that the user can buy a badge in the same machine where he/she can charge the card.

Modular Payment Options

The Antenor L200 recharge station can be configured to accept banknotes, coins, Proton, Bancontact or any mix of these payment options. If recharging is done using Proton or Bancontact, the user can first adapt the value using vandal proof buttons.

Robust and Reliable

The stainless steel case of the L200 is typically integrated in a wall offering an esthetical user access at the front and a secure operator access via a strong door at the back of the unit. The L200 is built based on the proven Antenor CPU-A controller. All payment modules and accessories have been carefully selected by Antenor to assure a reliable operation during a long life cycle.

User and Operator Friendly.

Thanks to a clear LCD display, a descriptive user guide and unambiguous icons, the L200 will guide both novice and frequent customers to an efficient purchase. The product can be configured in Dutch, French with other language variants on request.

For a seamless exploitation, the L200 keeps track of all recharge transactions and money received. This data can be audited using a straight forward operator menu or can be printed out comprehensively on a printer or PC.
