

ANTENOR L300: THE MODULAR RECHARGE STATION.

- Recharges Private Payment System.
- Support of different technologies.
- Modular Payment Options with cash and bankcard
- Optional distribution of cards.
- Robust and Reliable
- Simple to use for both Users and Operators.

Applications.

The L300 is the payment station to recharge an electronic purse used in private payment systems. Variants of the L300 exist to support different types of cards: based on magstripe, hard contact or contactless MIFARE cards. For some applications it is very useful that the user can buy a badge in the same machine where he can charge the card.

Modular Payment Options

The Antenor L300 recharge station can be configured to accept banknotes, coins, Proton, Bancontact or any mix of these payment options.

If recharging is done using a bankcard, the L300 is certified to accept Proton, BC/MC, Maestro, VISA and Master Card.,

Robust and Reliable

The steel case of the L300 is fixed to the wall using a strong back plate and heavy duty lock screws. The door has a multiple lock mechanism, a security lock and is covered with an enforcing yet elegant stainless steel plate. When the application requires so, vandal resistant buttons can be foreseen.

The L300 is built based on the proven Antenor CPU-A controller. All payment modules and accessories have been carefully selected by Antenor to assure a reliable operation during a long life cycle.

User and Operator Friendly.

Thanks to a clear LCD display, a descriptive user guide and unambiguous icons, the L300 will guide both novice and frequent customers to an efficient purchase.

The product can be configured in Dutch, French, bilingual or with other language variants on request.

For a seamless exploitation, the L300 keeps track of all recharge transactions and money received. This data can be audited using a straight forward operator menu or can be printed out comprehensively on a printer or PC.
