

PAYING FOR COPIES IN SELFSERVICE.

The discribed applications apply in libraries, copy-shops, warehouses, public places ...

INTRODUCTION:

To operate copy-machines in self-service, one has to rely on a reliable and efficient payment system.

PAYMENT BASED ON COUNTER VALUES

When copiers are always surveyed –as in a small copy-shop- , it may be sufficient to release the copier and read the number of copies made at the counter to charge the customer..

The Cartadis TC-counter has proven to be a very cost-efficient, simple and reliable tool since many years.

TC-teller

PAYING COPIES WITH COINS

When the copiers are used by passing-by customers, it may be valuable to install a payment terminal accepting Euro-coins. The **Cartadis CM4000** proves to be very straight forward in warehouses, small bookshops or at service centers.

CM4000

PAYING COPIES WITH THROW-AWAY MAGCARDS.

In libraries or larger copy shops where more frequent visitors wish to make copies, preloaded paper magstripe cards have proven to be very effective.

The cards are preloaded with a certain value of number of units and can only be used in one particular place.

The **Cartadis TC11N** payment terminal van accept both paper and plastic rechargeable cards and can make the distinction between 4 prices (e.g. colour/black and A3/A4)

Besides providing a very reliable and cost-effective solution, the cards increase customer loyalty.

TC11N

COMBINING PREPAID CARDS AND WORKING ON AN ACCOUNT.

In many environments different customer groups can make use of the same copier: e.g. visitors that have to prepay for the copies and employees that may make copies on the budget of their department.

The **Cartadis TC4N** is made just for this and accepts both preloaded or reloadable magcards as well as department cards. The counts on the TC4N can easily be consulted to obtain detailed consumption reports per department or job.

ANTENOR: YOUR PARTNER IN PAYMENT AUTOMATION.

Antenor Payment Systems can not only deliver and install the terminals on all types of copiers. Antenor also delivers personalised cards and can offer a practical SW tools such as APS-SW which allows to recharge or decrease cards through a graphical user interface.

Being a manufacturer of payment automats, Antenor can also deliver a wide range of **card vending machines and reloader stations** that accept both cash and bankcards.

CONCLUSION.

Together with his technology partners, Antenor can provide complete payment systems for all environments where copies need to be paid. Antenor has also great solutions for:

- payment and accounting of prints and copies based on Mifare badges
- Accounting copies and prints in service bureaus.
- Paper flow automation including follow me printing in enterprises in order to manage the paperflow and to increase productivity and confidentiality of the users.

Contact your account manager at Antenor for more information or for the best advice in your particular project.
